Education

Rutgers University
B.S. in Computer Science | B.S. in Physics | Minor in Mathematics
September 2023 - May 2027

Relevant Coursework: Data Structures & Algorithms, Discrete Mathematics, Linear Algebra, Multivariable Calculus, Differential Equations

Activities: IEEE-VEXU Robotics (Build Lead), Undergraduate Physics Research, Hackathon Competitor (3× Winner)

Experience

Iconectiv Ericsson
Software Engineering Intern
Bridgewater, NJ
June 2025 - August 2025

- Built and shipped Python microservices to ingest and visualize system telemetry, reducing workflow runtimes by 20% and increasing engineering throughput by 30%.
- Engineered integrations with Tenable, GitHub, and lifecycle APIs, enabling real-time cybersecurity insights for 5+ internal teams.
- Streamlined deployment reliability by optimizing CI/CD pipelines with Jenkins and AWS CodeBuild, cutting build failures by 30%.
- Developed a searchable VM inventory covering 100+ assets, accelerating detection and retirement of outdated infrastructure.

Iconectiv Ericsson
Software Development Intern
Bridgewater, NJ
May 2024 - August 2024

- Created a DevOps platform to monitor 200+ enterprise apps, eliminating manual dependency audits via continuous tracking.
- Engineered backend Python modules for computerized updates, which automated security patching cycles from weeks to hours.
- Launched an interactive Ruby on Rails + AngularJS dashboard suite with real-time alerts and filtering, driving proactive maintenance.
- Developed and shipped a metadata processing engine for 1,000+ GitHub repositories, powering 100+ live dashboards used by engineering teams

Awards

VEX Robotics World Championship – Top 25 Global Finish
Led development of motion control + PID systems for IEEE-VEXU robot, validating algorithms with test-driven development.
2025

HackRU 2024 – First Place
Built and deployed Holobrain, an AR neuroanatomy tool (Unity + C#, TensorFlow Lite) with real-time 3D model interaction; recognized as best project out of 200+ teams.
2024

Projects & Leadership

Statistical Arbitrage Simulator
2025

- Built a parallelized backtesting engine running 50+ trading configurations, accelerating research cycles by 40%.
- Integrated statistical tests and risk metrics (PnL, Sharpe, max drawdown) into modular APIs for flexible strategy evaluation.
- Deployed a Streamlit dashboard to visualize performance curves, enabling rapid iteration on thresholds and parameters.

AirNote
2025

- Built a full-stack system combining FastAPI microservices, WebSocket streaming, and Firebase cloud sync for real-time AR note capture.
- Implemented OpenCV homography + optical-flow tracking to keep virtual boards anchored as users move, achieving <30 ms latency.
- Deployed Gemini-powered Q&A API to interpret board content on demand, demonstrating multimodal integration across AI and web layers.

Myndful – AI Mental Health Chatbot (Winner of 2022 Congressional App Challenge)
2022 - 2025

- Co-founded and led engineering for an AI startup serving 6,000+ monthly users across 5+ schools.
- Architected full-stack systems (React, FastAPI, TensorFlow, AWS EC2) with scalable NLP pipelines for semantic retrieval and deep text classification.
- Achieved adoption and recognition through school deployments, 3 hackathon wins, presentations at 2 national education conferences, and a Congressional Award

Technical Skills

Languages: Python, C++, JavaScript/TypeScript, Java, SQL, Ruby, HTML/CSS

Frameworks & Libraries: React, Redux, Node.js, Express, FastAPI, TensorFlow, Streamlit

Cloud & DevOps: AWS (EC2, S3, Lambda), Jenkins, GitHub Actions, CI/CD

Tools: Git, Linux, Jira
